DETAILED ACTION

1. Applicant's election without traverse of Group I (drawn to a fusion protein), filed on March 3, 2009, is acknowledged.

Claims 1-39 are pending.

Claims 21-35, 38 and 39 have been withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim.

Claims 1-20 and 36-37 are currently under consideration.

2. Upon further consideration, the following species election has been set forth herein. The Examiner apologizes for any inconvenience regarding this matter.

Election/Restrictions

3. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

Applicant is required to elect one specific fusion protein composition wherein the fusion protein comprises specific binding protein, wherein the binding protein is:

- A) an antibody,
- B) a soluble receptor, **OR**
- C) a ligand protein.

If (B) is elected, applicant is further required to elect specific soluble receptor and to provide either name (e.g. a soluble TNF receptor II as recited in claim 14) or SEQ ID NO (e.g. SEQ ID NO:64 as recited in claim 15).

If (C) is elected, applicant is further required to elect specific ligand protein and to provide either name (LFA-3 as recited in claim 17) or SEQ ID NO (e.g. SEQ ID NO:65 as recited in claim 18).

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The following claim(s) are generic: claims 1-6, 36, and 37.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons:

Shinkawa et al. (JBC January 2003. 278;5:3466-3473, reference on IDS) teach antibodies that are produced in host cells that have deficiency in fucosyltransferase (e.g. see Abstract).

Such antibodies have N-glycan structure without fucose; thus, fucose is not bound to N-acetylglucosamine in the reducing end in the sugar chains (e.g. see Table 1 on page 3469).

Since Applicant's inventions do not contribute a special technical feature when viewed over the prior art they do not have a single general inventive concept and so lack unity of invention.

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
